

New and interesting Portuguese Lepidoptera records from 2020 (Insecta: Lepidoptera)

M. F. V. Corley, J. Nunes & J. Rosete

Abstract

13 species are added to the Portuguese Lepidoptera fauna, of which three are new for the Iberian Peninsula, and three species deleted, mainly as a result of fieldwork undertaken by the authors and others in 2020. In addition, second and third records for the country, new province records and new host-plant data for a number of species are included. A summary of recent papers affecting the Portuguese fauna is included.

KEY WORDS: Insecta, Lepidoptera, distribution, Portugal.

Resumo

Como resultado do trabalho de campo desenvolvido pelos autores e outros, principalmente no ano de 2020, são adicionadas 13 espécies de Lepidoptera à fauna de Portugal, das quais três são novas para a Península Ibérica, e três são retiradas. Adicionalmente, são apresentados segundos e terceiros registos de espécies previamente conhecidas, bem como novas plantas alimentícias para algumas espécies. É apresentado um sumário dos mais recentes trabalhos relevantes para a fauna portuguesa.

Resumen

Como resultado del trabajo de campo efectuado por los autores y otros, principalmente durante el año de 2020, se añaden 13 especies de Lepidoptera a la fauna de Portugal, tres de las cuales nuevas para la Península Ibérica y se eliminan tres especies. Adicionalmente, se muestran segundos y terceros registros de especies ya conocidas, así como nuevas plantas nutricias de algunas otras especies. Finalmente, se presenta un resumen de los trabajos más recientes que son relevantes para la fauna portuguesa.

PALABRAS CLAVE: Insecta, Lepidoptera, distribución geográfica, Portugal.

Introduction

This paper is the fifteenth in the series of annual summaries of new knowledge of Portuguese Lepidoptera. It gives records of species of Lepidoptera added to the Portuguese fauna in 2020 and some

unpublished earlier records, together with new province records not included in the checklist (CORLEY, 2015). Additional data include new data on larval host-plants within the country and second and third records of species for the country, which are only indicated when they are not in new provinces. Papers published in 2020 and part of 2021 that relate to the Portuguese Lepidoptera fauna are listed and briefly summarised. Finally, an Appendix lists the new species for Portugal separately, with numbers indicating their position in the checklist; new genera for Portugal have author and year of publication given.

13 species new for Portugal are listed below, of which three are new for the Iberian Peninsula. Three species are removed from the Portuguese list. A few of the new species listed here have been previously listed for Portugal, but the records were rejected in CORLEY (2015), as being erroneous or unsubstantiated.

In CORLEY *et al.* (2020) the number of Lepidoptera species recognised from Portugal was 2723. With the current paper and other papers mentioned herein, this total has risen to 2743.

Material and Methods

Most species were captured at light in traps of various kinds, over or beside a white sheet. For specimens not taken at light, the means of capture is given. Specimens are retained in the collections of the original recorders, unless otherwise stated. However, a few records are based only on photographic evidence.

The number of new district records in 2020 is considerably lower than in recent years. Covid 19 restrictions in Portugal and elsewhere and the consequent difficulties of international travel both contributed to a reduction in field work.

The order and nomenclature of families and species follows the Portuguese list (CORLEY, 2015). The nomenclature of plant names follows the EURO+MED PLANT-BASE.

The entry for species new for Portugal concludes with a summary of the known European distribution, and available information on the larval host-plant, given in square brackets if the information comes from outside Portugal.

Delete *Euzopherodes vapidella* (Mann, 1857) from the Portuguese list. NEL *et al.*, (2021) describe a new species *Euzopherodes vapidelloides* from France including Corsica and from Spain, distinct from *E. vapidella*. We have examined Portuguese specimens of *Euzopherodes* and found them to belong to the new species. There is no evidence that *E. vapidella* occurs in Portugal and it should be deleted from the Portuguese list. *E. vapidella* is known from Madrid, so its presence in Portugal remains a possibility.

Recent literature

ARNSCHEID & WEIDLICH (2021) review the taxonomy of the *Ptilocephala albida*-species group in Europe, concluding that there are three species. *P. albida sensu stricto* is found in France, south-west Germany, Switzerland and northern Italy, but not in the Iberian Peninsula. In Portugal and Spain the group is represented by *P. lorquiniella* (Bruand, 1853).

CORLEY & FERREIRA (2021) describe *Ypsolopha milfontensis* from the Alentejo coast, a new species with *Ephedra fragilis* Desf. as host-plant.

CORLEY *et al.* (2020a) raise *Agonopterix rigidella* (Chrétien, 1907) from synonymy with *A. fruticosella*. Both species occur in Portugal: *A. fruticosella* is recorded from Algarve; *A. rigidella* is recorded from Algarve and Estremadura.

CORLEY *et al.* (2020b) add 14 species to the Portuguese list and delete two.

CORRO CHANG & METZ (2021) transfer *Tuta absoluta* to genus *Phthorimaea*, based on a cladistic analysis of Gnorimoschemini.

FREINA *et al.* (2020) describe *Heterogynis cynetis* from Algarve. This is wholly or in part the species referred to in CORLEY (2015) as *H. penella* (Hübner, 1819). It has still to be ascertained whether *Heterogynis* from lowland localities further north in Portugal belong to the new species or another and if there is only one species in Algarve, but there is no reason to suppose that *H. penella* occurs in Portugal, and it should therefore be removed from the Portuguese list.

HUEMER & KARSHOLT (2020) place *Monochroa melagonella* in the genus *Pragmatodes* Walsingham, 1908. *Monochroa nigromaculella* (Millière, 1872) is transferred to *Oxypteryx* Rebel, 1911.

MOYA *et al.* (2017) made a very thorough genetic investigation of the relationships of *Argynnis* Fabricius and *Speyeria* Scudder. Their recommendation was that three genera should be recognised, *Argynnis*, *Fabriciana* and *Speyeria* but the justification for this recommendation was a reluctance to alter the names of numerous *Speyeria* species in North America to *Argynnis*. There were three lineages found, but *Fabriciana* and *Speyeria* are nested within *Argynnis*, so recognition of three genera is not justified on evolutionary grounds. For the Portuguese species, following their recommendation would mean changing the names of three of the five species. We favour retention of the name *Argynnis* for all five species, but suggest that the genera they recognise should be treated as subgenera.

NUNES (2021) adds new information on host-plants of 100 species of Lepidoptera within Portugal.

NUNES *et al.* (2021) add six new species for Portugal: *Aplota palpellus* (Haworth, 1828), *Anacamptis obscurella* (Denis & Schiffermüller, 1775), *Coleophora anitella* Baldizzone, 1985, *Apomyelois bistriatella* (Hulst, 1887), *Eublemma amoena* (Hübner, 1803) and *Xestia sexstrigata* (Haworth, 1809).

WIKSTRÖM *et al.* (2020) revise the *Pyralis regalis* group, raising subsp. *sagarrai* Leraut, 2005 to species rank and adding it to the Portuguese fauna, with records from Alto Alentejo and Trás-os-Montes.

Appendix: Changes to the Portuguese fauna list

Species added to the Portuguese fauna listed in this and other papers are summarised here, each with a number indicating their placement in the checklist (CORLEY, 2015). New genera for the Portuguese fauna show the author and year of publication of the genus.

Name changes resulting from changes at genus level or to new synonymy are given, with each species retaining its list number. In a case where a new name is provided for a previously misidentified species, the new species retains the number of the misidentified species. Thus *Euzopherodes vapidelloides* Labonne, Nel & Varenne, 2021 replaces *Euzopherodes vapidella* (Mann, 1857), which was previously misidentified, but the species retains the number 1523 in the checklist.

This appendix also gives the opportunity to make some corrections to taxonomic combinations, author citations and spelling of the nomenclature presented in CORLEY (2015). Affected species numbers are 1713, 2102, 2130, 2161, 2222, 2252, 2473.
